Nekoosa Digital Coated Papers Receive FSC Certification Products contain 10% postconsumer fiber

NEKOOSA, Wis. – Following a rigorous and comprehensive assessment, Nekoosa Coated Products has achieved Forest Stewardship Council (FSC) Chain of Custody certification (SGS-COC-004661) for its entire line of digital coated papers. Manufactured in the United States with 10% postconsumer waste, all of the company's digital coated papers meet the FSC strict standards for responsibly managed forests and forest products.

Engineered specifically to meet the demands of digital printing, the digital coated product line from Nekoosa includes a wide range of papers from 70# text to 100# cover weights in sheet sizes all the way up to 20.5" by 14.33". The company's packaging and collaterals have been updated to reflect this new certification.

Widely regarded as the source of the most credible environmental certification, the FSC is an international, nonprofit organization that develops standards to assure consumers that certified products come from forests and processes that meet current and future social, economic, and ecological needs.

Known for innovation in carbonless paper technology for over 50 years, Nekoosa Coated Products now offers digital synthetics and specialty papers, including its unique digital polyester called Thermanent[®], a full line of FSC certified digital coated papers, bond papers, and digital laminated papers.
